Subject: Genotyping protocols

To whom it may concern,

Thanks for accepting our Crry-Tg mice on C57Bl/6 background (MMRRC #11591).  
Here I am sending the PCR primers sequence as requested.

We use PCR to genotype the transgene on mouse tail DNA. The sequence for the  
PCR is (as published in J. Exp. Med. Vol 188, Number 7, October 5,1998,  
1321-1331):

5'-TCG TCC TAT CCG AGC CAG TCG T- 3'  
5'- GGC AGA AGG AAG CTG TGA TGG -3'

Please let me know if you have any questions.

Best wishes

Lihua Bao
