Comments on protocol:

- Use Touch-Down cycling protocol-first 10 cycles anneal at $65^{\circ} \mathrm{C}$ decreasing in temperature by $1.0^{\circ} \mathrm{C}$; next 30 cycles anneal at $55^{\circ} \mathrm{C}$.
- Betaine/DMSO is standardized due to high GC content in promoter regions. Also, may adjust $\mathrm{MgCl}_{2}$ to increase reaction or decrease non specific amplifications.

## Strategy:
