#### Comments on protocol:

- Protocol may work with other DNA extraction methods.
- Use Touch-Down cycling protocol-first 10 cycles anneal at 65°C decreasing in temperature by 1.0°C; next 30 cycles anneal at 55°C.
- Betaine and DMSO have been standardized due to high GC content. Protocol may be tested without. Also, may adjust MgCl<sub>2</sub> to increase reaction or decrease non-specific amplifications.

#### Electrophoresis Protocol:

#### Frameshift Indel 8bp deletion

#### Contig gtatgggatttaggagttcaaatgttggaacattacc

**Allele Description:** Exon 6 (ENSMUSE00000993299) received a 8bp deletion (**caaatgtt**) from the Nalcn gene (ENSMUST00000000201.6) using CRISPR Cas9 gene editing technology in mouse zygotes. This causes a frameshifted transcript followed by early termination signal. Subsequent founders were backcrossed to C57BL6/N to produce sequence confirmed heterozygous animals.
