Genotypes	Primer pairs	amplicon size (bp)
Floxed	loxF & -R	263
PreCre	neoF & -ttR	615
PostCre	lacF & -R	561
Wildtype	Defb14-F & -ttR	404
PostFlp	Defb14-F & -ttR	631
PostFlp & Cre	Defb14-F & -R	618

Please note, these primers are auto-designed and may not have been verified by the repository, and as such may require optimization or redesign by your facility.

We recommend running primers singleplex. For screening of pups prior to any Flp or Cre recombination, the Floxed or PreCre primers may be used to identify the mutant mice. The Floxed primers test for the distal LoxP site. The PostCre primers should be used if mutant mice were crossed with a Cre recombinase line (without any FLP recombination). The PostFlp primers should be used if mutant mice were crossed with a Flp recombinase line. The PostFlp & Cre primers should be used if mutant mice were crossed with a Flp recombinase line and then a Cre recombinase line. The wildtype primers should be used for zygosity testing of all mutant mice (pre or post recombination).
