The diagram illustrates the targeting strategy for the CSD locus. It shows the 5' and 3' arms of the locus, the targeting cassette (En2 SA, IRES, lacZ, pA, hBacP, neo, pA), and the Target region. Various CSD genes (CSD-gene-F, CSD-lacF, CSD-neoF, CSD-gene-ttR, CSD-gene-R) are shown with arrows indicating their locations and orientations. Red loxP sites are also indicated.

CSD-Slit1-R:	TGTTTGATCCCAGCATGCAGTTTCC
CSD-Slit1-ttR:	AACCCTCCTGTACCACCATTGAAGG
CSD-Slit1-F:	AGTCTCTGTTCCCTCTCCCTCTACC

Genotype	Forward Primer	Reverse Primer	Amplicon size (bp)
Floxed	CSD-loxF	CSD-Slit1-R	388
PreCre	CSD-neoF	CSD-Slit1-ttR	544
PostCre	CSD-lacF	CSD-Slit1-R	686
Wildtype	CSD-Slit1-F	CSD-Slit1-ttR	591
PostFlp	CSD-Slit1-F	CSD-Slit1-ttR	743
PostFlp & Cre	CSD-Slit1-F	CSD-Slit1-R	880

We recommend running primers singleplex. For screening of pups prior to any Flp or Cre recombination, the Floxed or PreCre primers may be used to identify the mutant mice. The Floxed primers test for the distal LoxP site. The PostCre primers should be used if mutant mice were crossed with a Cre recombinase line (without any FLP recombination). The PostFlp primers should be used if mutant mice were crossed with a Flp recombinase line. The PostFlp & Cre primers should be used if mutant mice were crossed with a Flp recombinase line and then a Cre recombinase line. The wildtype primers should be used for zygosity testing of all mutant mice (pre or post recombination).
