PreCre	CSD-neoF	CSD-R	595
PostCre	CSD-lacF	CSD-R	546
Wildtype	CSD-wtF	CSD-R	315
PostFlp	CSD-F	CSD-R	515

Please note, these primers are auto-designed and may not have been verified by the repository, and as such may require optimization or redesign by your facility.

We recommend running primers singleplex. For screening of pups prior to any Flp or Cre recombination, the PreCre primers may be used to identify the mutant mice. The PostCre primers should be used if mutant mice were crossed with a Cre recombinase line. The PostFlp primers should be used if mutant mice were crossed with a Flp recombinase line. The wildtype primers should be used for zygosity testing of all mutant mice (pre or post recombination).
