October 5<sup>th</sup>, 2021

Dear Colleagues,

We would like to provide an update to our letters sent out over the past year notifying our clients of a finding of *Corynebacterium bovis* and *Pseudomonas* in our M3 Mouse Barrier Facility. As previously mentioned, we have depopulated the affected colonies and thoroughly disinfected our facility, which was all completed without any issues. We have continued thorough screening of our vivaria and reestablished our sentinel screening program and have had all negative results for *C. bovis* and *Pseudomonas*, as well as negative results for all other excluded pathogens. We are continuing our diligent efforts to ensure our facility is maintained to the highest of standards.

We are grateful to our dedicated staff who work extremely hard to ensure our biosecurity measures were maintained which prevented these pathogens from spreading to other colonies and allowed us to quickly eliminate it from the building. We thank all of our customers for your patience and understanding as we have addressed this situation and are grateful for your continued support of the Mouse Biology Program and associated Mutant Mouse Resource and Research Center (MMRRC) at UC Davis. If you have any questions, please feel free to contact myself or our customer service team.

Best Regards,

A handwritten signature in cursive script, appearing to read "Kristin Grimsrud".

Kristin Grimsrud, DVM, PhD  
Assistant Clinical Professor, Dept of Pathology, School of Medicine  
Associate Director of Vivaria and Veterinary Care, Mouse Biology Program (MBP)
