

This report summarizes the cumulative results of tests performed on dirty bedding sentinels from Room 112 MBP at UC Davis, CA. Note data are reported as positive tests / total tests performed. Please contact the Mouse Biology Program at 530-757-3333 or email mbp@ucdavis.edu with questions about this report or animal health related issues.

¹LN = Lymph Node

²NT = Not Tested. Fur mite PCR screening is performed on a semi-annual basis.

⁴NT = Not Tested. Beginning in March 2021, pinworms PCR screening is performed on a semi-annual basis

⁵NT = Not Tested. We were notified sentinel mice were exposed to *C. bovis* from the stock colony prior to transport to MBP 2nd Street vivarium. Upon notification, all sentinel animals were submitted for screening and we received notice of positive test results for *C. bovis* on May 28, 2021. Further screening of animals in room was performed and on June 1, 2021 new sentinels were obtained from a different source/vendor. After 6 month of consecutive negative swabs, supplementary swabbing was discontinued. Sentinel testing continues to be performed regularly through culture, with PCR from swab samples only conducted if lesions are present.

The MBP 2nd Street Facility area is a 7-room, conventional production building located at the University of California, Davis.
